Introduction

This document provides step-by-step instructions on how to set up secure access to the Virtual Research Data Centre (vRDC). **All vRDC users** will need to configure their account for **two-factor authentication (2FA)**. Additionally, vRDC users working in **Authorized Workspaces**¹ (remote access) need to install software to access the vRDC on their personal computer.

Pre-requisites

You will be given an account and password to log in to the vRDC after you completed the **Mandatory Training Session** and signed and returned your **forms**. Your vRDC account info, along with registration codes, must be obtained from the RDC to complete the steps below. Ensure that you have the following items then proceed with the next steps.

No.	Item	Description
1	Account username and temporary password for the vRDC	Account used to log in to the vRDC . You have one single account to access all your projects. Pick up your login credential sheet from the RDC Staff.
2	FortiToken activation code	Activation code to register your account for 2FA . This is a one-time use code to activate your vRDC account in the FortiToken mobile app on your cellphone. The code is on the credential sheet. Email the CRDCN IT (it_ti@crdcn.ca) and CC statcan.vrdctransition-transitioncdv.statcan@statcan.gc.ca to request for a new FortiToken activation code if the one you received from the RDC has expired (include your username and RDC name in the email).
3a* *For users working remotely	FortiClient software invitation code	Invitation code used to register the FortiClient software on your personal device for remote access to the vRDC. This is only required if you are, and have projects that are, eligible for Authorized Workspace access. RDC Staff will email you the code. It must be deleted from your inbox after use.
3b* *For users working remotely	Updated Mac or PC with antivirus software	The personal device you will use to connect to the vRDC. See the CRDCN's FAQ for more info on technical requirements: https://crdcn.ca/virtual-research-data-centre-vrdc-2/ . Only required if you are, and have projects that are, eligible for Authorized Workspace access.
3c* *For users working remotely	Internet connection (no public wi-fi)	Personal device must be connected to the internet if you are using it to connect to the vRDC.

Your vRDC account information, and configuration codes are **sensitive information** and **must be kept confidential**. Do not disclose this information to anyone.

¹ Remote access in an approved space (such as a closed office, a closed classroom or conference room, or a private space within the researcher's personal residence)

A. Install Mobile App for 2FA

Required: All vRDC Users

Description:

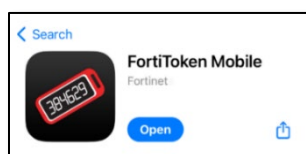

FortiToken is the application that will facilitate 2FA when you log in to the vRDC. The FortiToken app must be installed on your cellphone. After you register your account, you will need to use the 6-digit code from the FortiToken app every time you log in to the vRDC.

You must install the FortiToken app on only **one mobile device**. Please choose the primary device that you would normally carry with you when accessing the vRDC/RDC site.

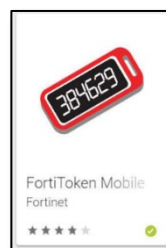

Instructions:

1. Install the FortiToken mobile app

Search for “**FortiToken Mobile**” in the App store or Google Play store and download the app onto your phone². The icons for the app could look like this:

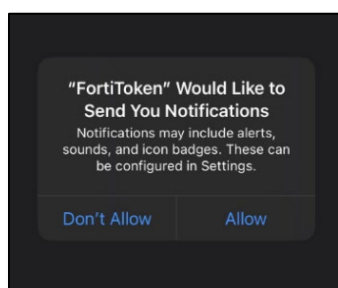

iPhone App store

Android Google Play store

2. Register your vRDC account in FortiToken

The **FortiToken activation code** will be on the piece of paper with your username which you picked up from the RDC. Do not confuse this with the FortiClient software invitation code.

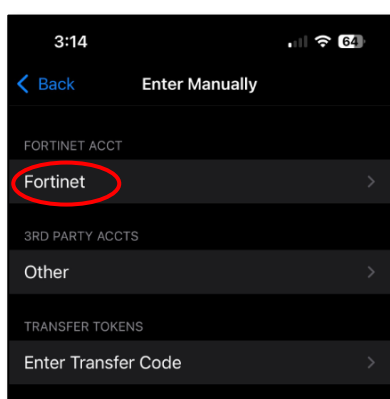

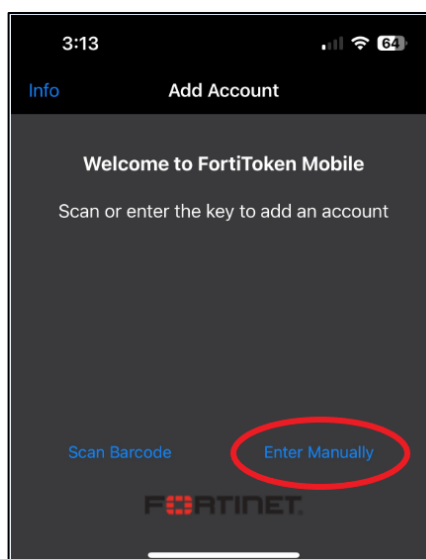

Example: FortiToken requesting to send notifications on iPhone

Open the FortiToken app in your cellphone. Typically, you will be asked if the app can send you notifications. For the vRDC, it **does not matter what you select**.

² Optionally, you can use the download links from the FortiToken website for Apple iOS and Google Android, **but do not** download FortiToken on Microsoft Windows: <https://docs.fortinet.com/document/fortitoken/latest/fortitoken-mobile-user-guide/682454/installing-fortitoken-mobile>

Next, select the option to **Enter Manually** in the bottom right corner.

Then, select **Fortinet** under “FORTINET ACCT”.

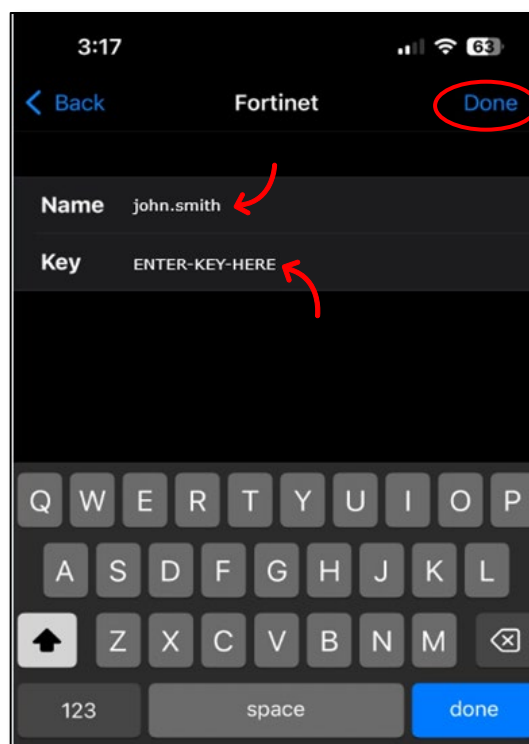

Now, enter your username and activation code.

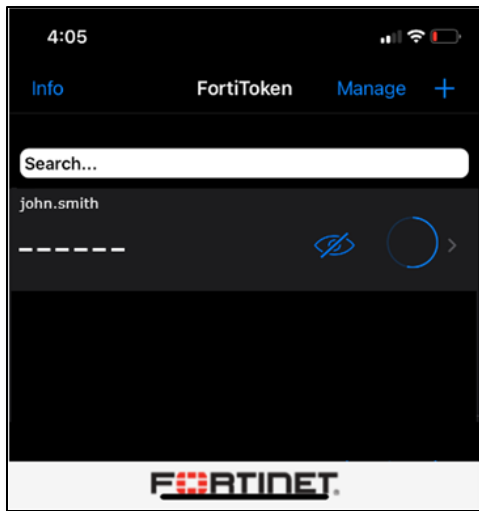

Enter your **vrDC username** in the **Name** field.

Enter the **FortiToken activation code** in the **Key** field.

Click **Done** in the top right corner.

Note: The *name* is just a **label** in FortiToken. You can choose to call this “vrDC Account” or have the word “vrDC” in the name if you need to. Whatever makes it easy for you to identify this entry as your vrDC account. You can change the name anytime in FortiToken too. In some versions of FortiToken, you will need to choose a name that fits the max. character limit.

Your vRDC account is now set up for 2FA! You will see it every time you open the FortiToken app.

Tip 1: Click on the eyeball icon to reveal the 6-digit token for 2FA.

Tip 2: If your account username is not shown and you see a long string of code instead, then change it by clicking on the account, click on “Name” in the next screen, and then modify the name to your vRDC account.

Accessing the vRDC from the RDC site? Proceed to the [Logging In to the vRDC](#) section of this document.

Accessing the vRDC remotely on your personal device? See the section below on how to install FortiClient on your personal computer before proceeding to log in.

B. Connect Personal Computer to the vRDC

Required: Only vRDC users who are accessing the vRDC in an “Authorized Workspace”

Description:

FortiClient is the software that will facilitate a remote connection to the vRDC. FortiClient will need to be installed on your personal computer (i.e., a Windows PC or Mac). This is only required if you have RDC projects that are approved for access in an *Authorized Workspace*.

You must install FortiClient on only **one personal computer**. Please choose the primary computer that you will use when accessing the vRDC.

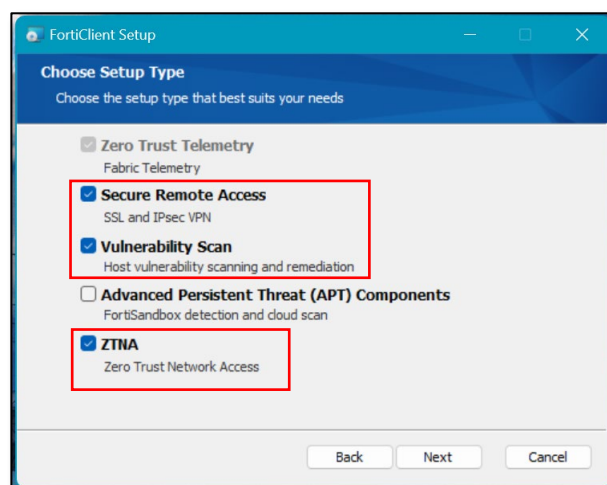

Instructions:

1. Install the FortiClient software

Go to the Fortinet website and download the FortiClient “VPN/ZTNA Edition” software applicable for your **computer** (e.g., Windows 64-bit or MacOS): <https://www.fortinet.com/support/product-downloads#ztna>. Do not download the software for mobile versions to your phones or tablets (iOS or Android); it will not work for the vRDC.

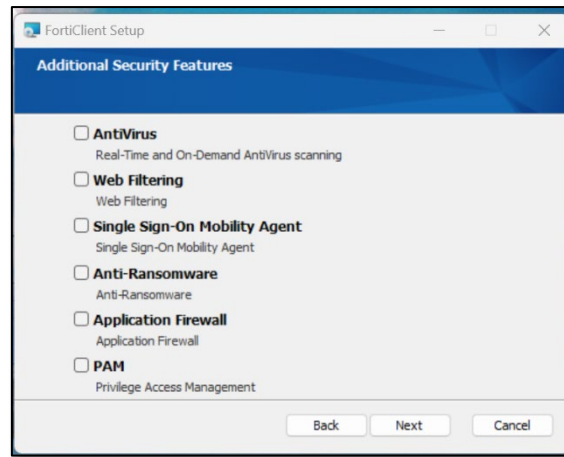

In the first screen that has options, select the boxes for “**Secure remote Access**” and “**Vulnerability Scan**”, and “**ZTNA**”.

Click Next.

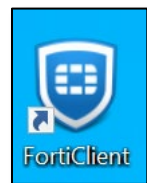

In the second screen with options, **do not select any boxes**. Leave all the boxes blank.

Click Next.

When the installation is done, you should see the **FortiClient icon** (a blue shield) on the computer's desktop and in the computer's system tray (expand the arrow in the bottom-right corner of your taskbar).

Desktop Icon

System Tray in the taskbar

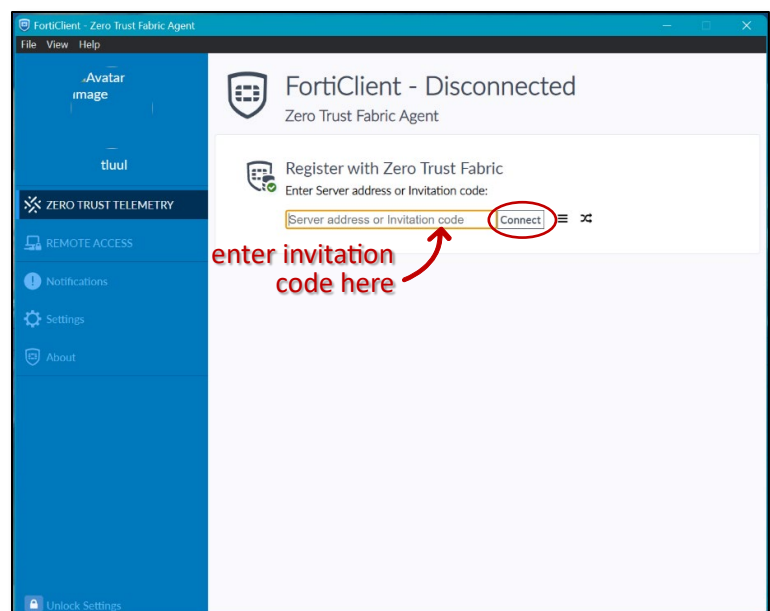

Please see the [Appendix 1. Install FortiClient on a Windows Computer](#) or [Appendix 2. FortiClient Installation on Mac](#) for a detailed step-by-step guide on how to install FortiClient.

2. Configure FortiClient for vRDC Use

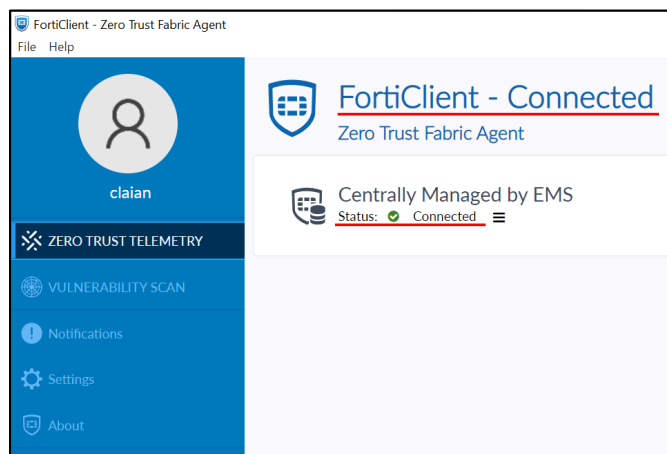

The **FortiClient software invitation code** is emailed to you from RDC Staff after you pick up your account credentials from the RDC, and it will come by the end of the day. The subject line for the email is “as discussed” and the only text in the email will be the invitation code. Do not confuse this with the FortiToken activation code on your credential sheet.

Open the FortiClient software on your personal computer. The field to enter the invitation code is under “**Register with Zero Trust Fabric**”. If you do not see this, click on the “**Zero Trust Telemetry**” tab on the left navigation pane (see photo below).

Copy the **FortiClient software invitation code** in the email that was sent to you and paste it into the software. Then, click **Connect**.

Once you connect, the software will show your status as “**Connected**” with a green checkmark. The header will also change and say “**FortiClient – Connected**”.

At this point, please **delete the email with the invitation code** from your inbox and **delete it again** from the Trash folder.

FortiClient is now set up to facilitate a connection to the vRDC on your personal computer. The software must be **connected** and **running** to log in and access the vRDC Portal in the next step. The software can be running in the background of your computer when you are not accessing the vRDC, or you can shut it down. To shutdown FortiClient when it is not in use, open your computer’s system tray (click on the arrow pointing up ^ in the bottom right corner of your desktop), then right-click on the blue shield icon for FortiClient, and click on **Shutdown FortiClient**. This will shut down the software until you relaunch the software or restart your computer³.

3. Before Logging In – Authorized Workspace Users

Open an internet browser on your personal computer and go to the **vRDC Portal website**:

<https://ws1a.rdc-cdr.ca>. Use Google Chrome for best results.

Please see the next step on logging in to the vRDC.

C. Log In to the vRDC

Your **account username and temporary password** will be on the piece of paper that you picked up from the RDC.

Logging in to the vRDC is the same on a terminal in the RDC and on a personal device in an Authorized Workspace. In the vRDC, the sign in screen (below) will appear when you turn on a terminal.

³ If you need to uninstall FortiClient from your personal computer, then please submit a Service Request to the CRDCN to disconnect your computer from FortiClient first. You need to disconnect before you can uninstall. Instructions on submitting a Service Request is in the [Support](#) section of this document.

The **Fortinet Sign In** screen will appear at the entrance to the vRDC Portal. Put in your vRDC **username** and the **temporary password**.

Then click **Login**.

 The image shows the Fortinet Sign In screen. At the top is the Fortinet logo. Below it is the text "Sign in". There are two input fields: the first is labeled with a person icon and contains the text "john.smith"; the second is labeled with a lock icon and contains the text "Password", with an eye icon to its right. A green "Login" button is at the bottom right.

Next, you will be prompted for a two-factor authentication code, like in the picture on the right.

 The image shows the Fortinet Two-Factor Authentication screen. At the top is the Fortinet logo. Below it is the text "Confirm on Your Mobile Device or Enter Token Code". There is an input field labeled "Token Code" with a key icon on the left and an eye icon on the right. The username "john.smith" is displayed above the field. A green "Login" button is at the bottom right.

Go to your cellphone and open the **FortiToken** app. You will see a **6-digit token code** under your username. If you do not see the numbers, click the eyeball icon to reveal it. A new code is generated every 60 seconds; the timer is beside the eyeball icon.

Input the **6-digit token code** into the Fortinet Sign In screen on the computer to complete 2FA. Click **Login**.

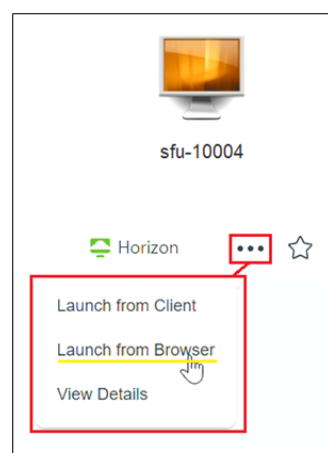

After you log in, you will enter the **vrDC Portal**. In the portal, there will be a **virtual machine (VM)** for each of your RDC projects (see photo below). Some projects/VMs are approved to be accessed in *Authorized Workspaces*, and some projects/VMs can only be accessed in the RDCs.

To open a project to work on, click on the **three dots** for the VM and select **“Launch from Browser”**.

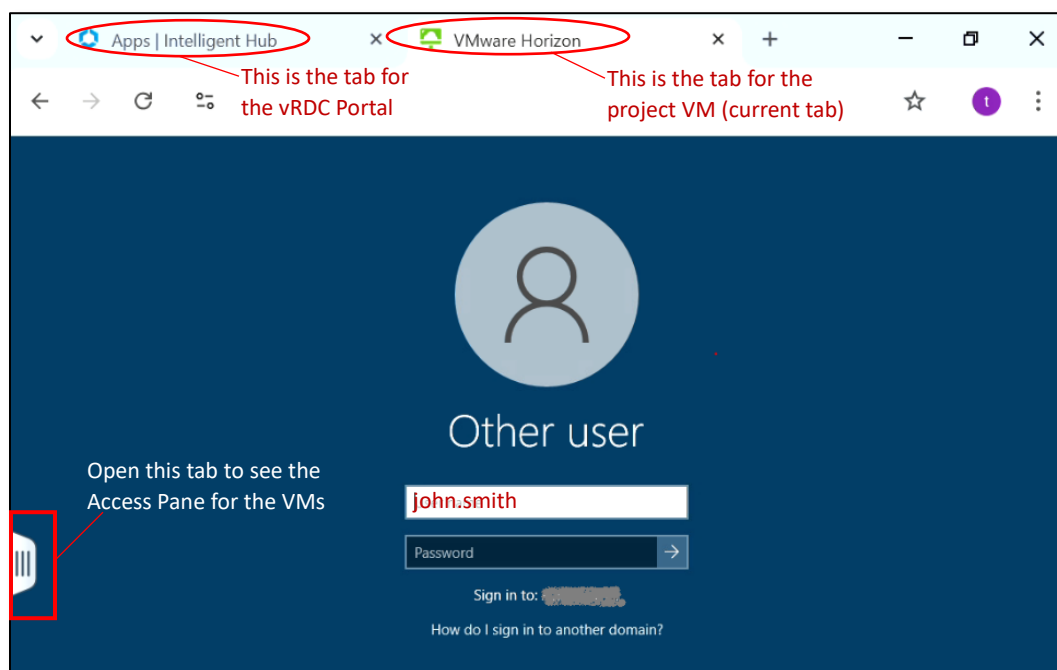

Tip: If you are accessing from a personal device, you can **download the Horizon Client** on your device, and then click on the VM icon to launch it in the Client. This is optional, though it is recommended as the experience may be smoother in the Client. Instructions on how to download the Horizon Client is in the vrDC User Manual located in the Researcher’s Toolbox in your project VM.

Next, you will see a **welcome message**. Read the message and click **Accept** to proceed to the desktop.

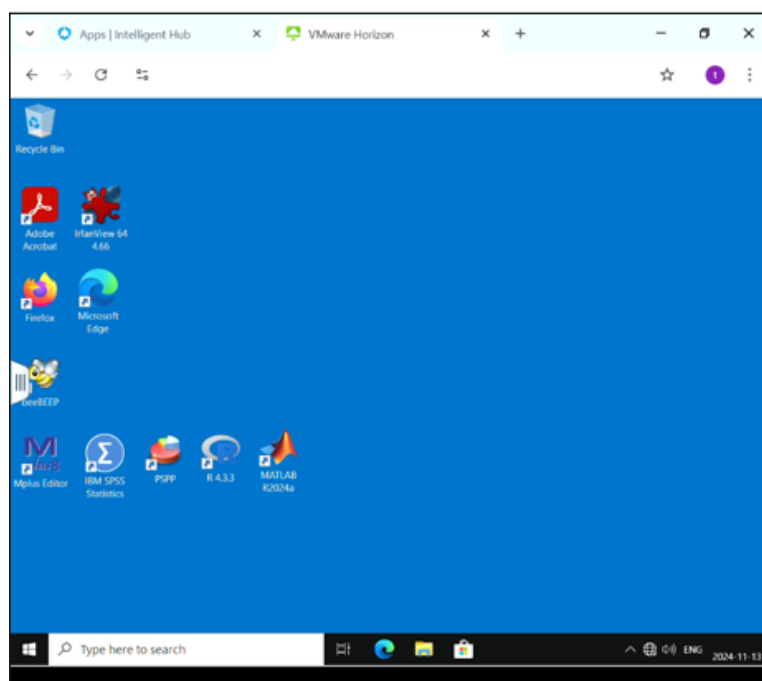

The VMs will look like a Windows computer. When you first enter a VM, you will need to log in to the Windows desktop. A pop-up will appear to ask if you want to use the VM in **Fullscreen**. **This is your choice**. You can also put the VM in Fullscreen mode later and any time during the work session.

Type in the **your vrDC username** and **temporary password** and log in.

Wait for the authentication to finish and for the computer to start up.

You will see a Windows desktop when the computer has finished starting up. You will find additional statistical software programs and other applications in the Start menu. At this point, please **change your temporary password** (instructions below).

You **must** reset your password if you are still using a temporary password.

D. Change Password

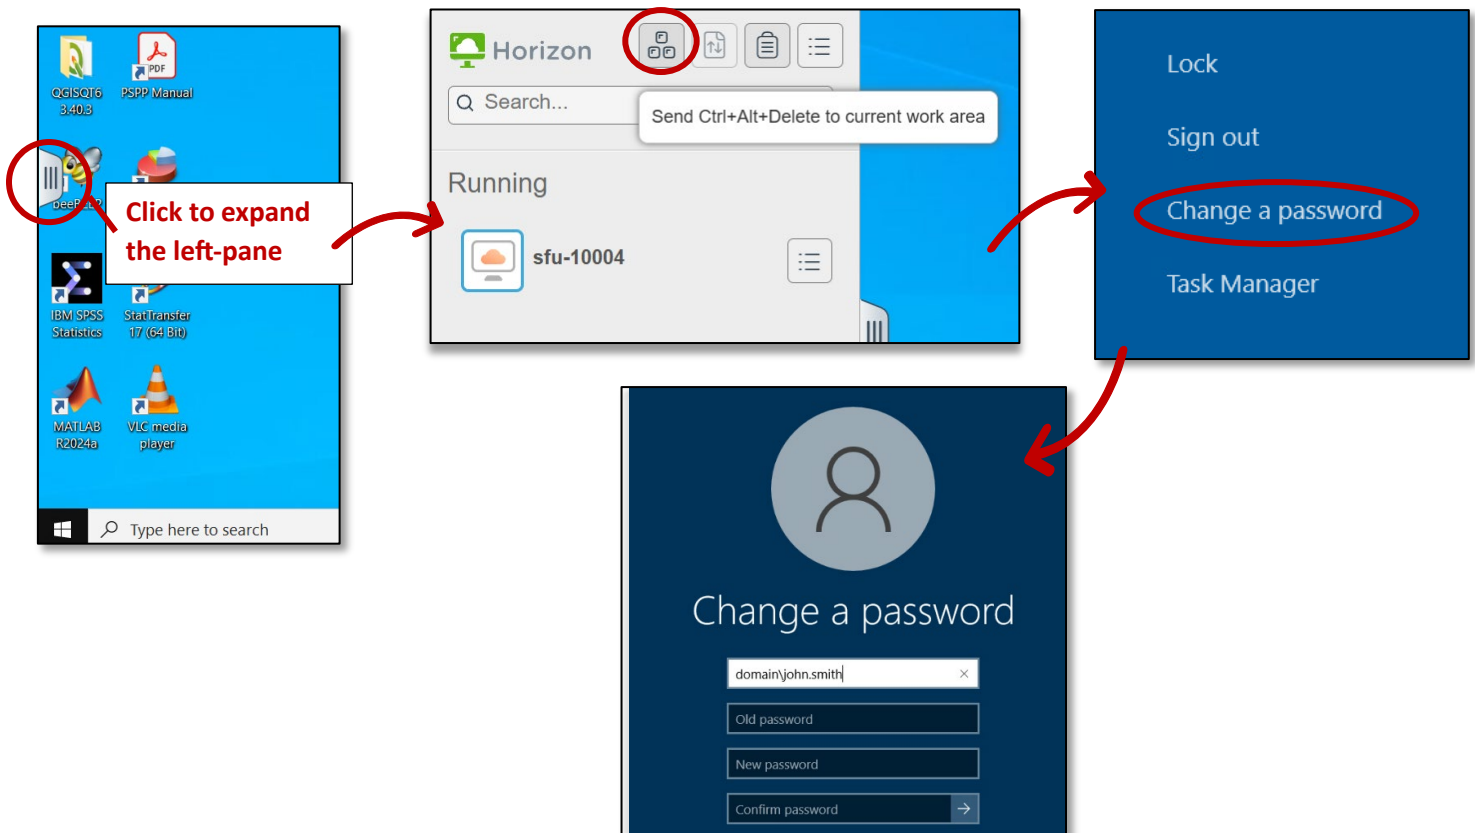

Follow these steps to change your temporary password:

1. In your project VM, click on the **gray tab** on the left side of the screen to expand the Navigation Pane
2. Click on the icon with the **3 squares at the top** to send a “Ctrl+Alt+Del” command to the current work area⁴
3. In the window that comes up, select “**Change a password**”
4. Next, input the temporary password in “Old password”. Then create a new personal password for your vRDC account.

Your password must have:

- at least 8 characters or symbols
- at least one uppercase letter (e.g., A, B, C)
- at least one lowercase letter (e.g., a, b, c)
- at least one digit or one special character (e.g., 1, 2, 3, @, #, \$).

The 12 most recent passwords cannot be reused, and passwords must not contain all or part of the account username.

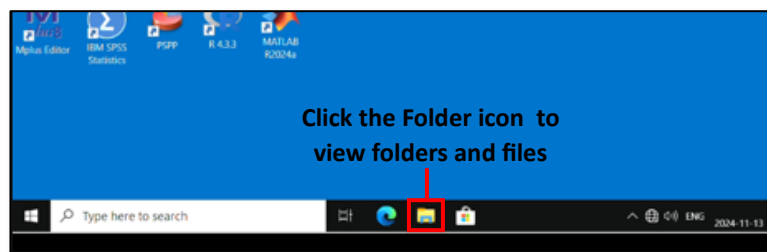

⁴ If you are working on a terminal in the RDC, you can just enter “Ctrl+Alt+Del” on the keyboard instead doing this step. However, for users accessing on their personal device, hitting Ctrl+Alt+Del on the personal keyboard will run the command on the local computer, not the project VM. Therefore, remote users must use the left navigation pane.

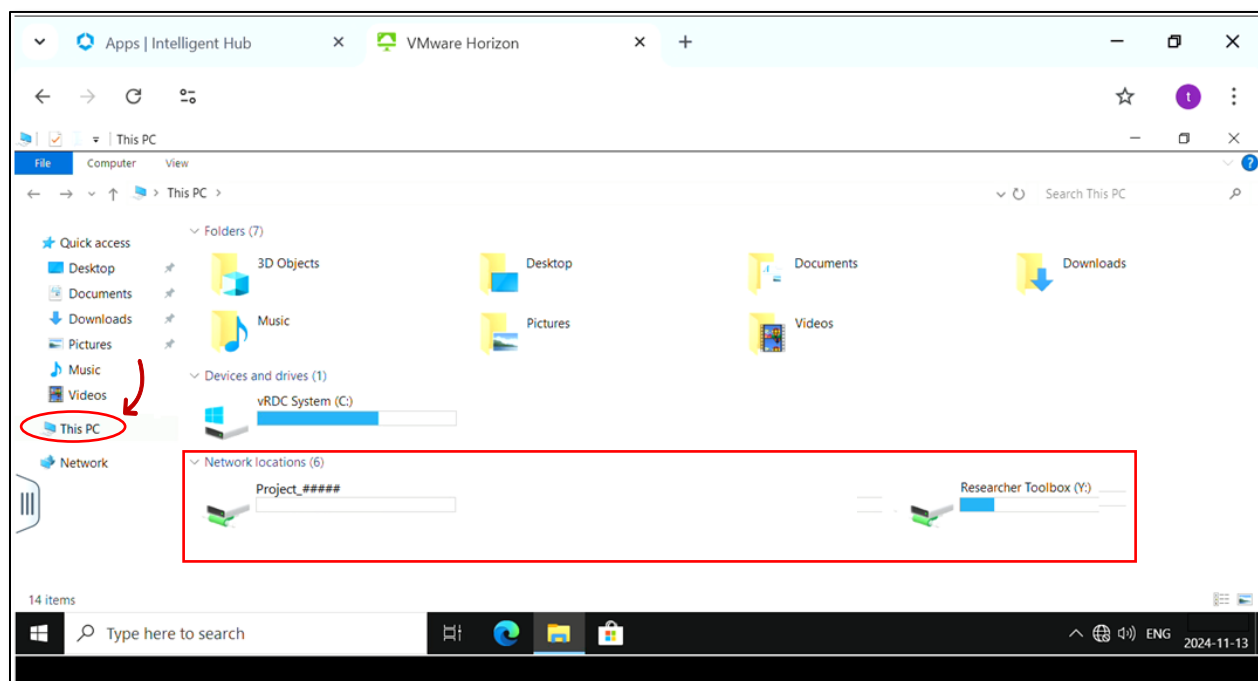

There will be a warning on the Windows desktop when your password is almost **expired**. You **must** reset your password before it expires.

Once you have reset your password, please explore the vRDC using the **vRDC User Manual** stored in the Researcher's Toolbox. It will show you how to navigate the VMs, access project/data files in the vRDC, and use the tools that are available in the vRDC.

To get to the **vRDC User Manual**, launch Windows Explorer (the folder icon) to **access files and network folders**.

In File Explorer, click on **"This PC"** in the left-hand pane. The drives that you can access are under **"Network Locations"**. There is a drive for your **Project** which contains your project folder and StatCan dataset folders, and a drive called the **Researcher Toolbox** where we store resources for researchers.

Open the **Researcher Toolbox**. Then, open the file called **vRDC User Manual**.

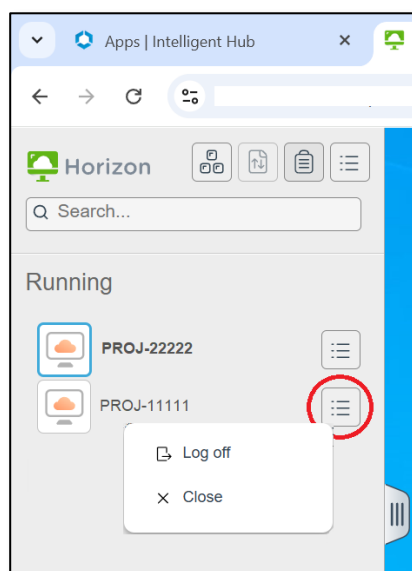

E. Logging Off (Shutting Down) vs. Closing (Disconnecting) a VM

You have two options when finished with a VM session: logoff/shutdown or close/disconnect. **Logging off will completely terminate your session, so you must save your work before you log off.** Virtual machines will be destroyed on logoff, so any files that are not saved in the Project drive will be **erased and destroyed**. This is the equivalent to selecting Shutdown from the Windows Start Menu.

Closing a VM keeps the session still running on the vRDC servers and should only be used if you are running a long series of code in the background. The next time that you log in to that project VM you will be re-connected to your session. A VM running in the browser is also closed if the browser tab, or browser itself, is closed.

Note: You **must log off** a VM if it is not actively being used. VMs that are disconnected will remain running for 7 days before being automatically shut down to preserve resources. This is to allow time for researchers to run intensive code and return to save their output. This time window will be shortened if it is abused by researchers leaving sessions running unnecessarily. Please do not use this functionality to avoid closing and reopening your work.

To logoff from and/or close a VM use the options in the Start Menu, or from the Navigation Pane (click on the three dots beside the project VM and select the appropriate option).

F. Common Issues

We offer general information on troubleshooting below. If you can get into the vRDC and access a VM, then more info can be found in the **vRDC User Manual**.

If you are experiencing issues with the steps in this Quick-Start Guide, then please **sign up to attend a Login Demo** session. You will be able to speak with an RDC staff member and/or a member of the CRDCN IT team during the session to troubleshoot your issues. The steps on how to sign up for a session is in the **follow-up email that you received after you finished your Mandatory Training Session**.

Password Errors

Issue: You cannot log in to the vRDC with your current password. You are getting “incorrect” or “expired” password errors.

Solution: Speak to the RDC Staff who can assist in resetting your password.

Token Code or 2FA Errors

Issue: Your FortiToken activation code has expired, or you received a new phone and need to register your vRDC account on the new phone.

Solution: Email the CRDCN IT (it_ti@crdcn.ca) and CC statcan.vrdctransition-transitioncdrv.statcan@statcan.gc.ca to request for a new FortiToken activation code. Include your username and the RDC name in the body of the email.

Unable to See and/or Launch a VM/Project

Issue: You do not see your project (VM icons) in the vRDC portal.

Solution: Email RDC Staff to check your account permissions on the project and the VM entitlement status. RDC Staff may need advanced troubleshooting from the CRDCN IT if permissions and entitlement are configured properly and you still cannot see the project.

Issue: You get an error that says “Request Failed” when you try to launch a VM.

Solution:

1. Ensure you are accessing the project from the approved location. If you, or your project, is not eligible for remote access, then the VM will not open on a personal device.
2. Verify if your co-investigators are accessing the project. It could be that the maximum number of users is logged in to the project. One of them will need to log out of their VM for you to launch yours.
3. If accessing from a personal device via an internet browser, check that your browser has not blocked pop-ups for the page. If it has, adjust your settings to allow pop-ups and try again.
4. If you still receive this error message after checking access location and co-investigator logins, then email the CRDCN IT (it_ti@crdcn.ca) for advanced troubleshooting.

In the meantime, you can try to see if the project can be opened on a terminal in the RDC site.

Cannot see or open Project Drive (Z:\) or Project Folder

Issue: You do not see or you cannot open the Project Drive. Or you cannot see or open your VRDC-PROJ-##### project folder in the project drive.

Solution: Seek support from the CRDCN IT team (it_ti@crdcn.ca). Be sure to include your project number in your email.

Cannot see or open the StatCan Data Folders

Issue: You are missing a data folder. Or you cannot open a data folder that is in your project drive.

Solution: If you are missing a data folder, send an email to the vRDC Transition Team (statcan.vrdctransition-transitioncdrv.statcan@statcan.gc.ca) and let us know. If you see a data folder but cannot open it, email the CRDCN IT (it_ti@crdcn.ca) for support.

FortiClient Software Invitation Code Error (Authorized Workspace Access)

Issue: The FortiClient software invitation has expired.

Solution: Reach out to your RDC Staff to obtain a new software invitation code.

FortiClient Installation File Blocked (Authorized Workspace)

Issue: When you download the FortiClient installation file from the Fortinet website, the installation file is blocked in your internet browser. The common warning signs that you will see in the “Downloads” tab of the internet browser are:

- “File can’t be downloaded securely”
- “This file is dangerous so Chrome has blocked it”

Solution: If you encounter a warning stating that the Fortinet software "cannot be downloaded securely," then this may be due to an expired certificate from the software vendor (Fortinet). While this does not necessarily indicate a security risk, we recommend proceeding with caution. If you are unable to proceed with the download, then contact the CRDCN (it_ti@crdcn.ca) to obtain an alternative download link.

Receiving a FortiClient Error Notification (Authorized Workspace)

Issue: You are receiving notifications on your computer that says, “FortiClient ZTNA Agent – An error has occurred in the FortiClient ZTNA Agent, click here to view the details”. Moreover, it says “Not Connected” with a red circle in your FortiClient software.

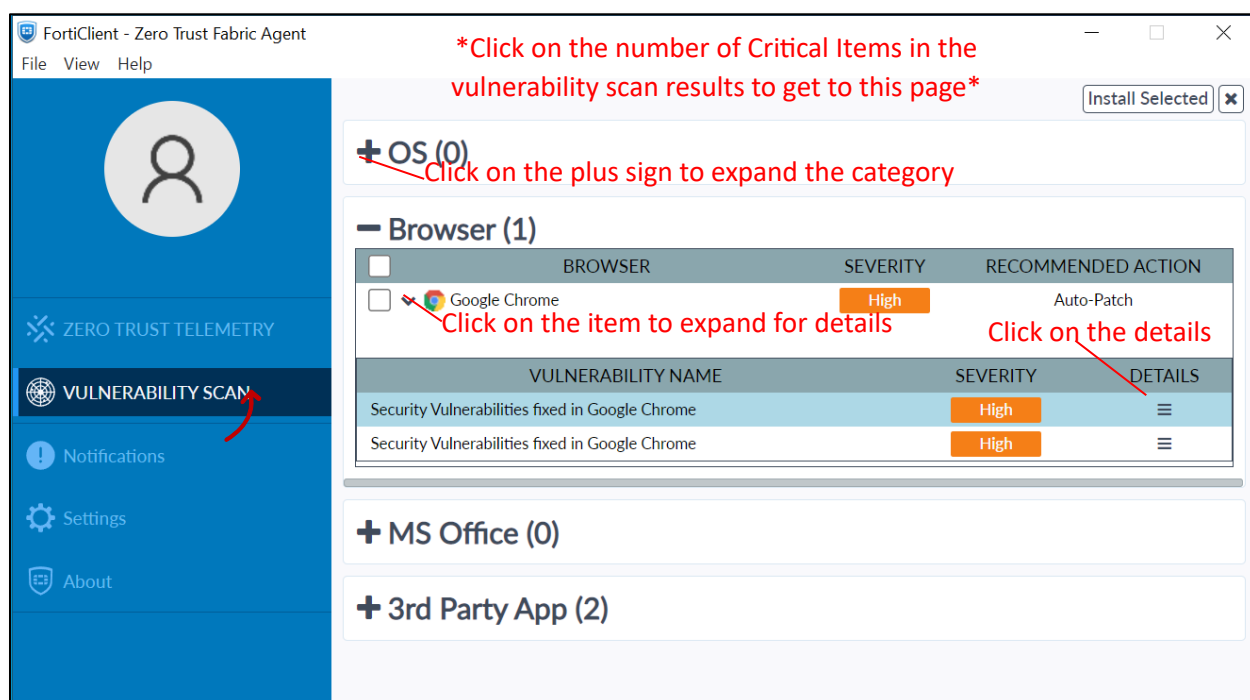

Solution: First, make sure your computer is up to date and it is connected to a stable internet connection. Your device must be compatible with the vRDC with no critical vulnerabilities (see the CRDCN’s FAQ for more info on technical requirements: <https://crdcn.ca/virtual-research-data-centre-vrdc-2/>). If running Windows, then make sure you have an active antivirus software running and that it is up to date.

Unable to Access the vRDC Portal (Authorized Workspace)

Issue: You downloaded the FortiClient software, and it says that you are “Connected” with a green circle. However, you cannot get onto the vRDC Portal website. The website says that “the connection for this site is not secure”. Additionally, you might have received a notification from FortiClient about an error, and if you open it, it says “ZTNA Policy Denied, error code: 064”.

Solution: First, make sure your computer is up to date and it is connected to a stable internet connection. Verify that you are connecting to the right URL (<https://ws1a.rdc-cdr.ca>). Your device must

be compatible with the vRDC (see the CRDCN's FAQ for more info on technical requirements: <https://crdcn.ca/virtual-research-data-centre-vrdc-2/>). If you are using Windows, then make sure you have an active antivirus software running. You can also check to see if there are any vulnerabilities that may be impacting your connection. To do this with FortiClient, open the software, click on **Vulnerability Scan** (on the left-hand pane), and then click on **Scan Now**. Wait for the scan to finish. The results will tell you if there are any **critical items** that could be blocking the connection. It will also tell you high, medium, and low items, but you need to resolve the **critical** items. If there are any critical items, click on the number, then expand the tab for each category. Under the categories are the items to resolve; expand those items and click on the "Details" for the instructions on patching the item (see photo below). You can try to access the vRDC Portal again when you resolve all the critical items.

Please be reminded that your project is accessible in the RDC on a thin-client machine if you are unable to establish a remote connection to the vRDC.

Support

Please reach out for additional support if the solutions provided above do not work for you or if you are experiencing different issues.

The vRDC Transition Team is holding **Login Demo** sessions that you can attend if you are having any issues getting started with the steps above. A CRDCN IT member will also be available in the sessions to help troubleshoot the issues. Please see the follow-up email that you received after finishing your Mandatory Training Session to sign-up for a Login Demo session.

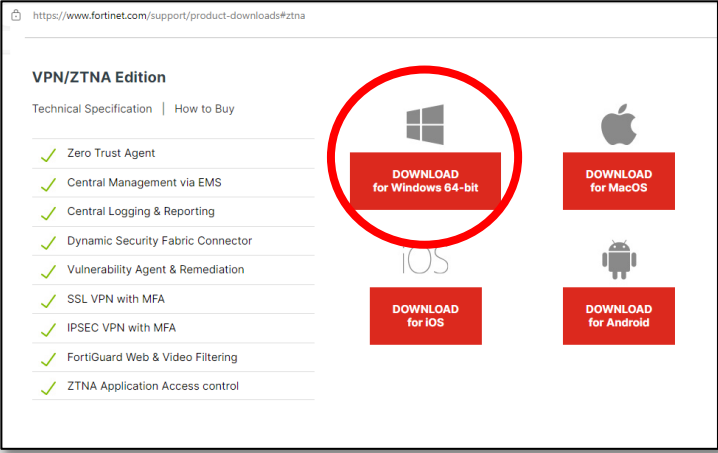

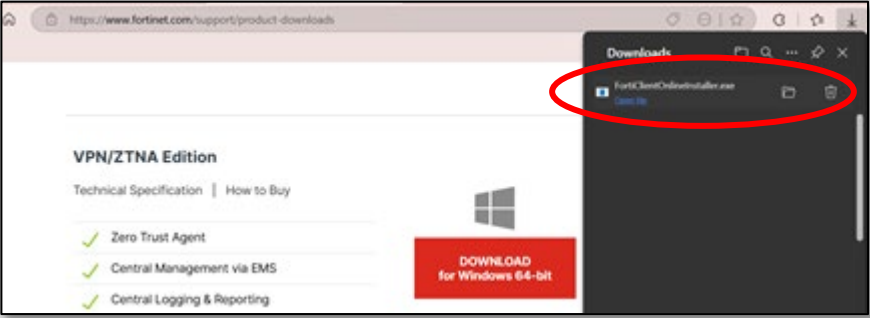

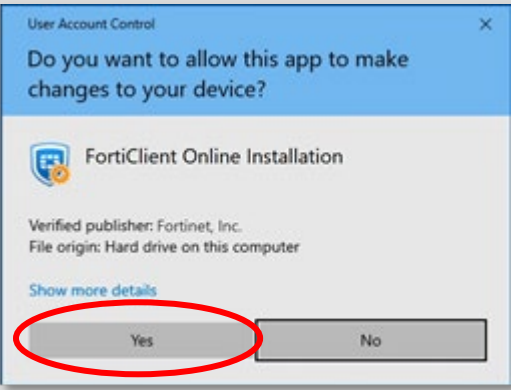

For advanced IT troubleshooting, including system, network, FortiClient, virtual machine, and issues, please send the CRDCN IT an email at it_ti@crdcn.ca. If you are accessing the vRDC remotely on a

personal device, and your FortiClient software is connected, then you can also submit and track a Service Request (SR) ticket to the IT team via their SR Portal here: <https://srticket.rdc-cdr.ca>⁵

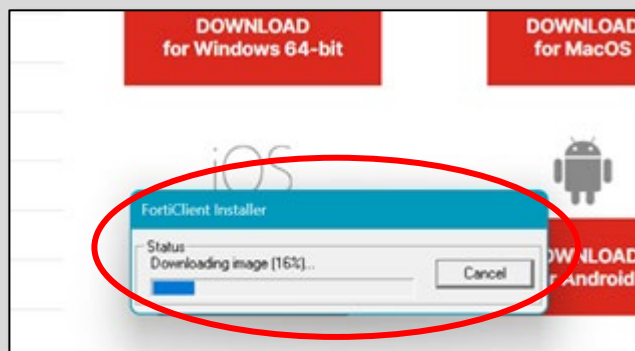

If you have any questions or run into issues that are unrelated to the initial vRDC IT set-up then please speak to the RDC Staff.

⁵ If the CRDCN's SR System is unavailable or you are not able to reach it due to issues with the Forticlient software, then you can contact the CRCDC IT team via email at it_ti@crdcn.ca. Note that emails sent to this address will be converted by the IT team into an SR ticket, so it is most expedient to submit a ticket directly in the SR System if it is accessible.

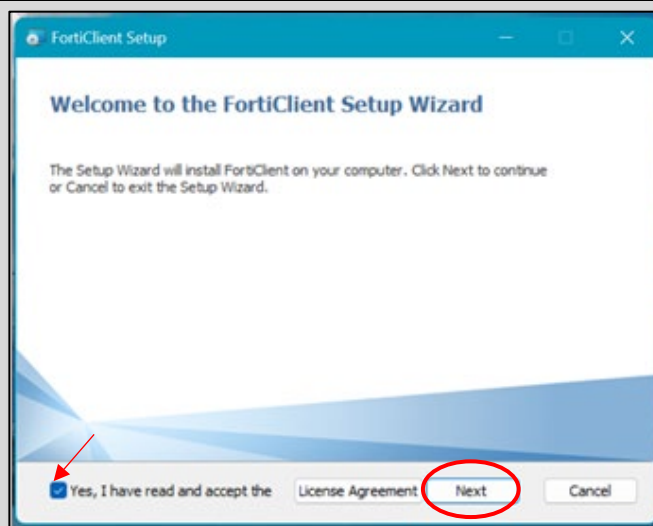

Appendix 1. Install FortiClient on a Windows Computer

Step	Photo Reference
1. Go to the Fortinet website to download the FortiClient VPN/ZTNA Edition software. Select the option to Download for Windows 64-bit.	 The screenshot shows the Fortinet website page for FortiClient VPN/ZTNA Edition. On the left, there is a list of features with green checkmarks. On the right, there are four download buttons: 'DOWNLOAD for Windows 64-bit' (circled in red), 'DOWNLOAD for macOS', 'DOWNLOAD for iOS', and 'DOWNLOAD for Android'.
2. Click on the Downloads tab on your internet browser and click on the installer file called FortiClientOnlineInstaller.exe to open it.	 The screenshot shows the same Fortinet website page, but with the browser's Downloads tab open on the right. The file 'FortiClientOnlineInstaller.exe' is highlighted and circled in red.
3. A pop-up appears asking “Do you want to allow this app to make changes to your device?”. Click “Yes” to proceed.	 The screenshot shows a Windows User Account Control dialog box titled 'User Account Control'. It asks 'Do you want to allow this app to make changes to your device?'. The application is 'FortiClient Online Installation' by Fortinet, Inc. The 'Yes' button is circled in red.

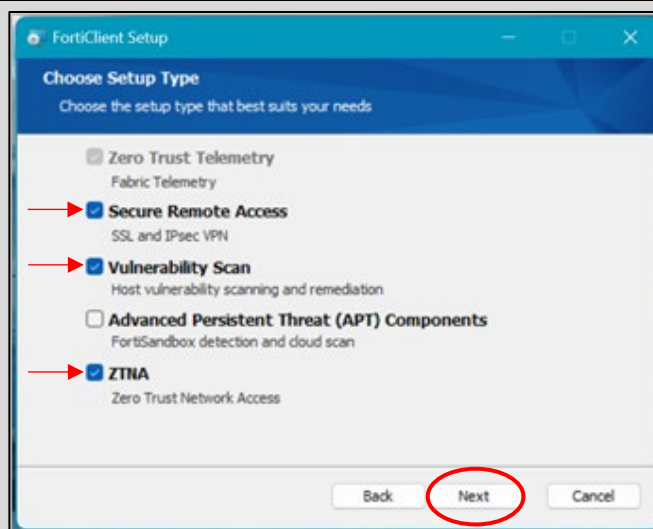

4. The FortiClient installer will load up. **Wait** for it to finish. The picture shows you what it looks like when it's loading.

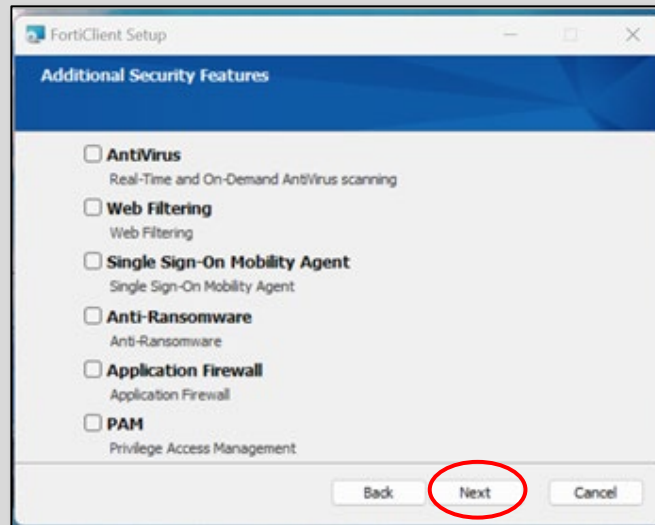

5. The installation window will appear when it is done loading. Click the box for “**Yes, I have read and accept the License Agreement**” and click **Next** to proceed.

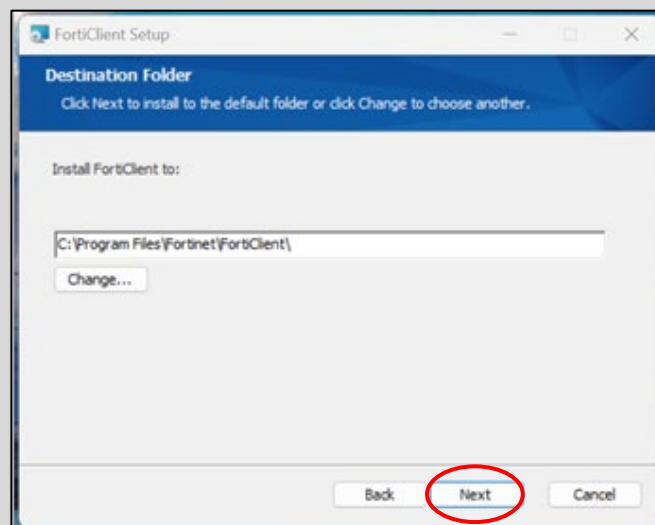

6. In the next window, make sure the following **three** boxes are checked for set up type: Secure Remote Access; Vulnerability Scan; ZTNA. Then click **Next**.

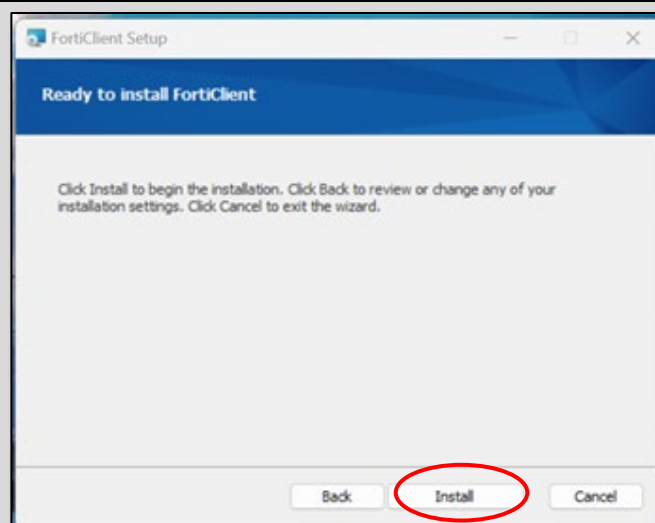

7. In the next window, **do not select** any boxes for additional security features. Leave them all **blank**. Then, click **Next**.

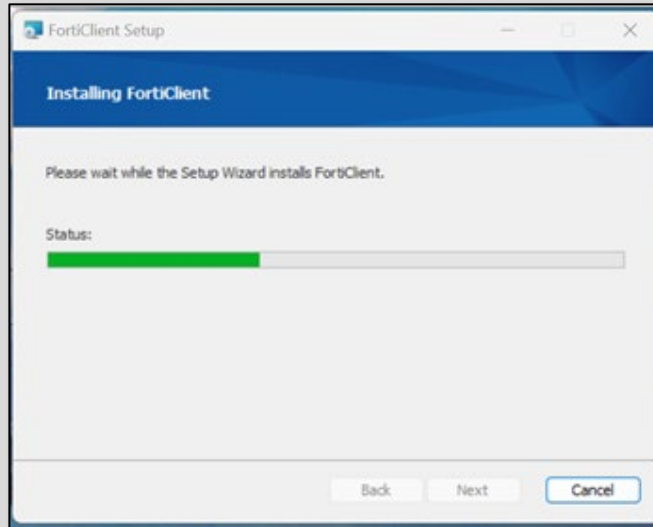

8. The next window shows you where the software file will be downloaded. It is your computer's default location. Click **Next** to proceed.

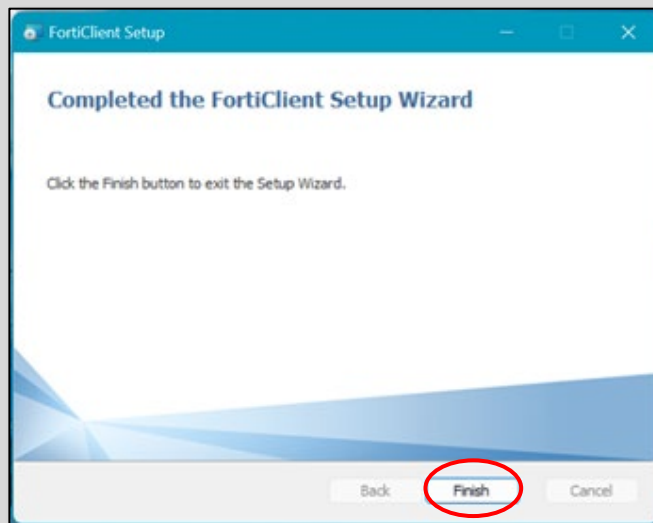

9. Click **Install** in the next window.

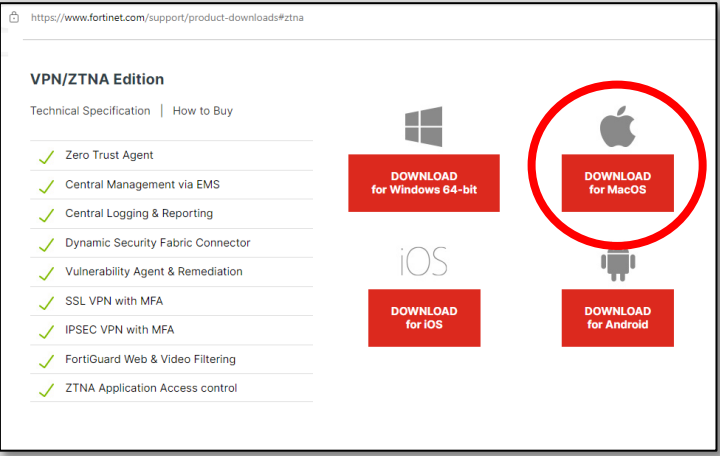

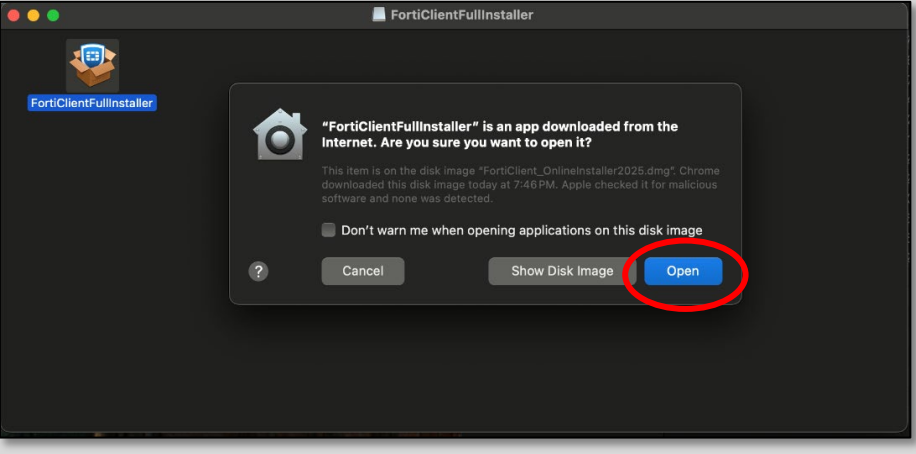

10. **Wait** for the installation to finish.

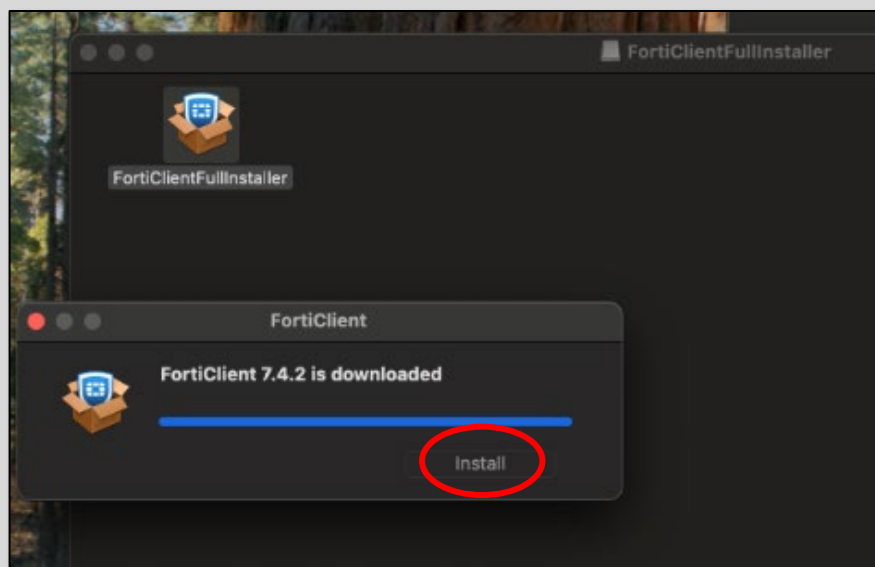

11. The installation is done! Click **Finish** to exit the installation window.

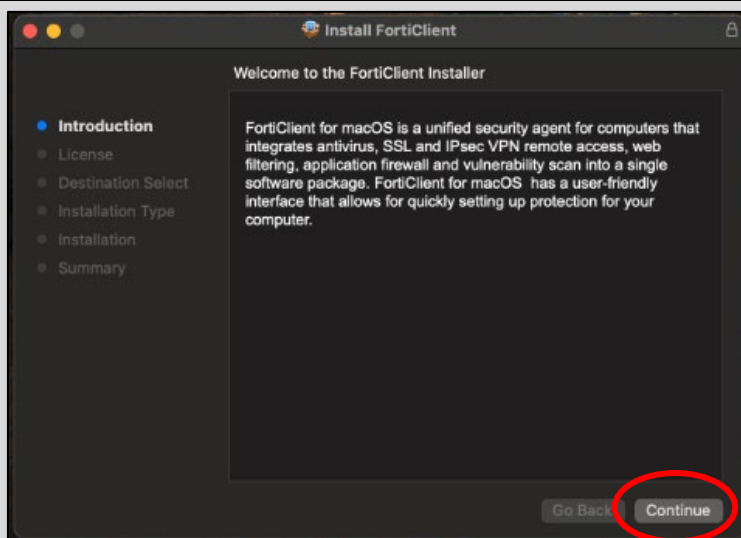

Appendix 2. Install FortiClient on a Mac Computer

Step	Photo Reference
1. Go to the Fortinet website to download the FortiClient VPN/ZTNA Edition software. Select the option to Download for MacOS.	 The screenshot shows the Fortinet website page for FortiClient VPN/ZTNA Edition. On the right side, there are four download buttons: 'DOWNLOAD for Windows 64-bit', 'DOWNLOAD for MacOS' (circled in red), 'DOWNLOAD for iOS', and 'DOWNLOAD for Android'. On the left side, there is a list of features with checkmarks.
2. Access your Downloads and open the FortiClientFullInstaller file. Then, double click on the installer to open it.	 The screenshot shows the Mac Downloads folder. The 'FortiClientFullInstaller' file is highlighted with a red circle. A red arrow points from a text box to the file icon. In Downloads, double click on the FortiClientFullInstaller
3. A pop up will appear saying that the installer file is downloaded from the internet and if you want to open it. Click on open.	 The screenshot shows the FortiClientFullInstaller window. A security warning dialog box is displayed, asking if the user wants to open the app. The 'Open' button is circled in red.

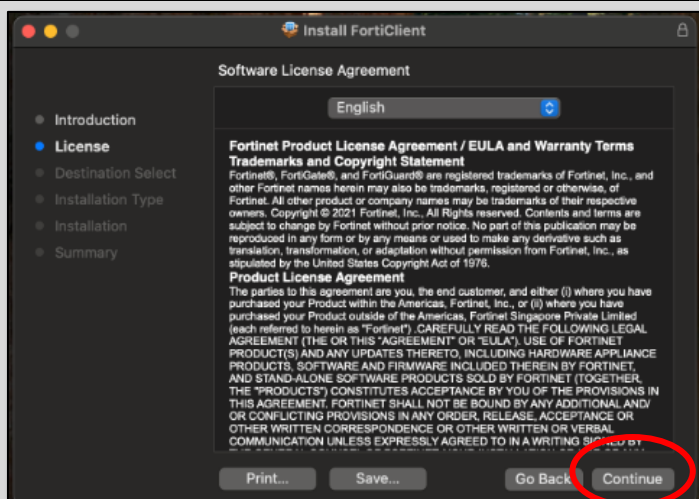

4. Next, **wait** for the installer file to download. Then, click **install**.

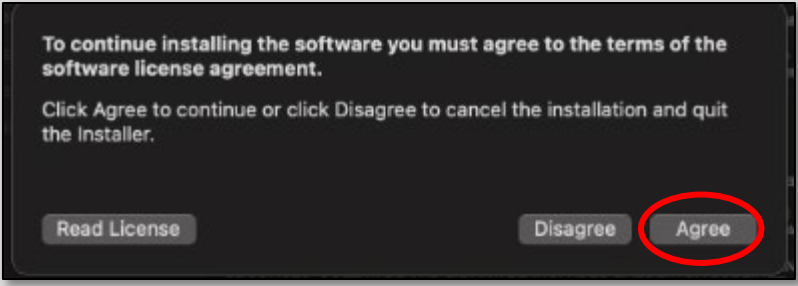

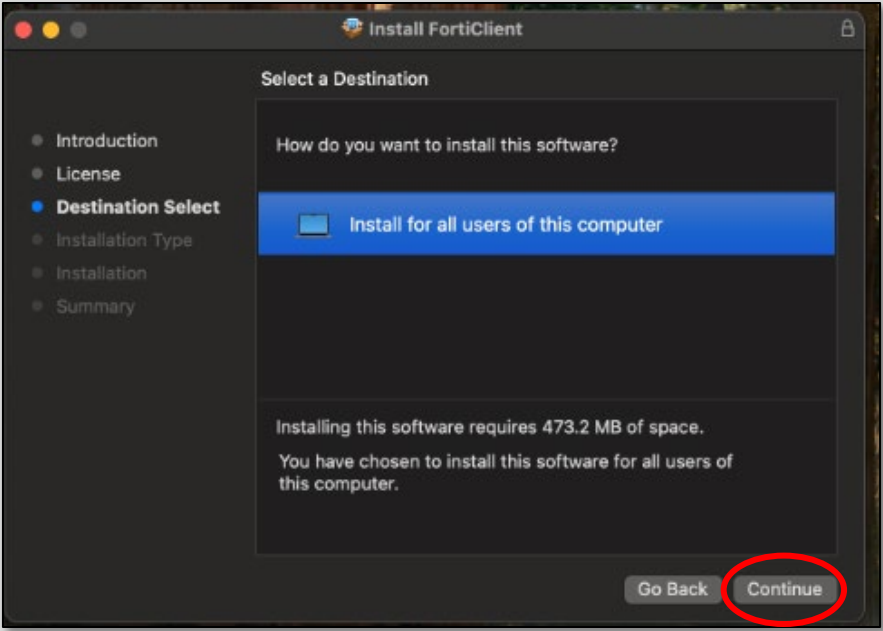

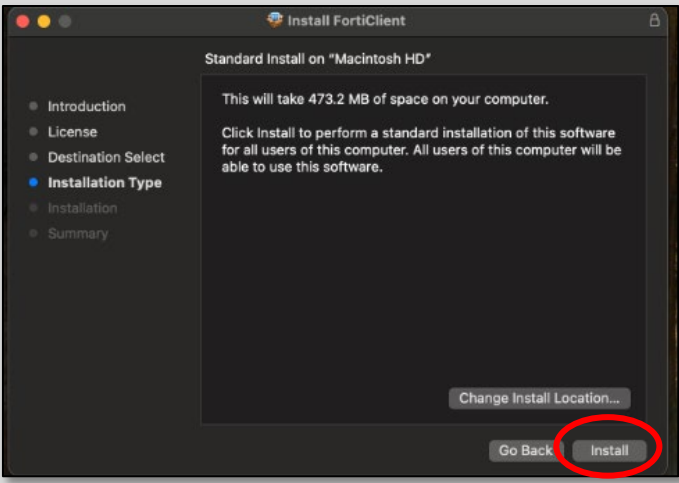

5. The installation window will pop up. Click **Continue** to proceed.

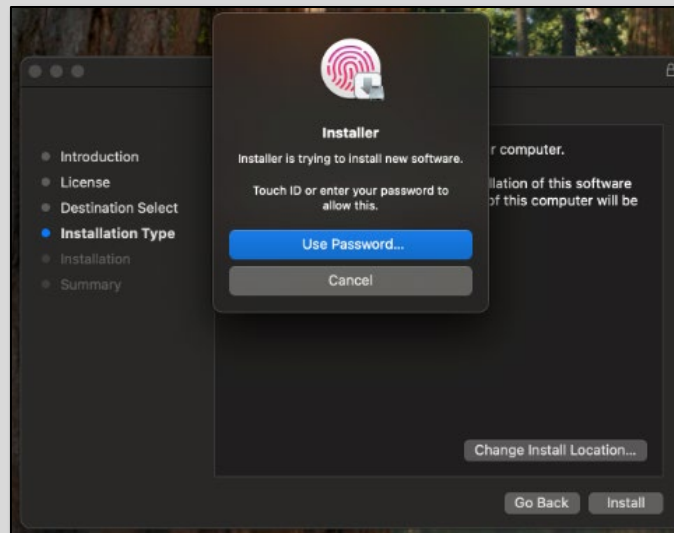

6. Next, is the license agreement. Click **Continue**. A pop-up will appear for you to agree with the license. Click **Agree** to proceed.

	
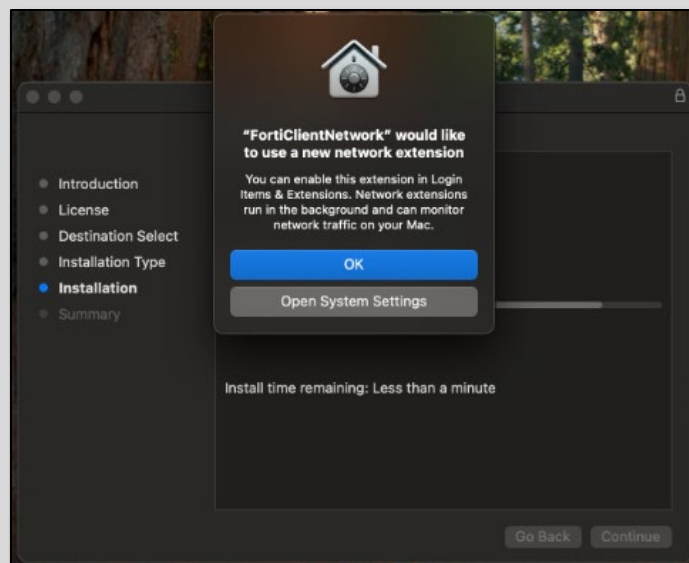

7. Next, you select a destination to install the software. The option to install it for all users on the computer might be highlighted. Click Continue to proceed.	
8. Next, you can click Install to install the software in the standard location that software is stored on your device. Or you can change where the software file will be.	

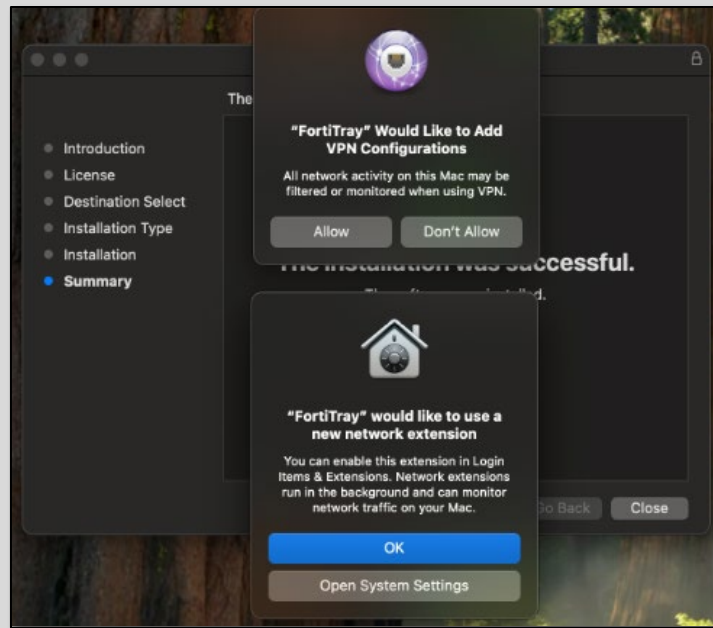

9. Your Mac computer will ask for you to confirm that you want to install this file. Use Touch ID or enter your password to proceed.

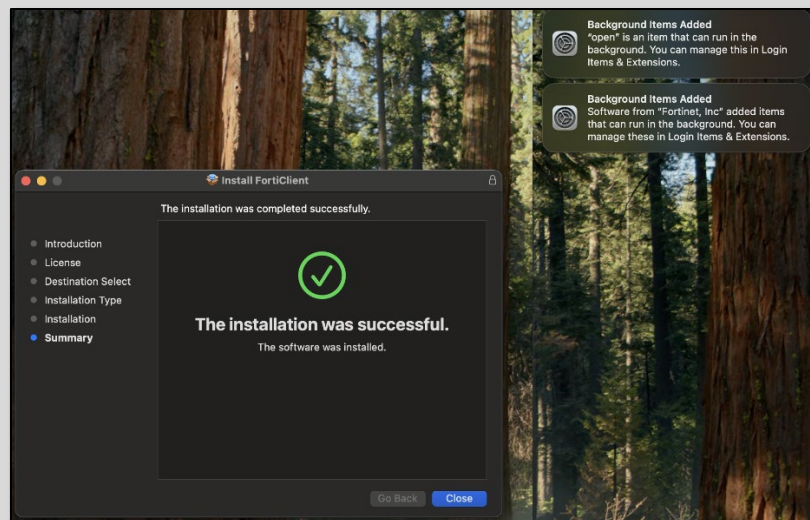

10. Another popup will appear asking if you would like "FortiClientNetwork" to use a new network extension. Click **OK** to proceed.

11. Two more popups will appear. In the top popup, click **Allow** to proceed, and in the bottom popup, click **OK** to proceed (see photo).

12. You are done installing FortiClient. Click **Close** to exit from the installation window. Note that you may get notifications regarding the new changes.
