

## Geometric Sketches (Larger, Clear Callouts Away from Curves)

Each figure shows the dashed **secant** approaching the **tangent** as  $h \rightarrow 0$ . Labels are placed in white boxes away from curves, with arrows pointing to the relevant points/lines.

Figure 1: For  $f(x) = x^2$ , the secant (orange) approaches the tangent (red) as  $h \rightarrow 0$ . Here  $f'(1) = 2$ .

Figure 2: For  $f(x) = x^3$ , the secant (orange) approaches the tangent (red) as  $h \rightarrow 0$ . Here  $f'(1) = 3$ .

Figure 3: For  $f(x) = \sqrt{x}$ , the secant (orange) approaches the tangent (red) as  $h \rightarrow 0$ . Here  $f'(1) = \frac{1}{2}$ .
