

**MATH 220 - A1 (Linear Algebra) [CRN 51157]****Fall 2023**

Lectures : Mondays and Wednesdays, 4 - 5:20 pm, Room 5-183, G. R. Weller Library

Instructor : Fatma Cicek

E-mail : cicek@unbc.ca

Office : 10-4522

Office Hours : Will be held in MACE (10-2088). Wednesdays, 2-3:30 pm.

Supplemental Instruction by the Academic Success Centre : To be conducted by *Matt Nadeau*. Several sessions will be available and more information will be announced later.

Course Description :

This course covers systems of linear equations, matrix algebra, determinants, vector geometry, vector spaces, eigenvalues and diagonalization. We will start with vector and matrix algebra.

Course Material :

Linear Algebra with Applications, Keith Nicholson. It is available online:

<https://lyryx.com/wp-content/uploads/2018/01/Nicholson-OpenLAWA-2018A.pdf>

The book will be linked at the Moodle as well. Make sure to use this version.

You are also very much encouraged to take notes during the lecture and form your own set of notes.

Evaluation Policy :

Final exam : 32%

Assignments : 18% in total

Two midterms : 23% each

Two quizzes : 2% each

Exam Dates :

Quiz 1 : 4 October 2023

Midterm 1 : 16 October 2023

Final : To be announced later

Quiz 2 : 8 November 2023

Midterm 2 : 20 November 2023

Some Remarks :

- The course announcements and the material will be posted to our course moodle. Course notes will not be posted, but solutions to assignments/quizzes/midterms will be.
- The SI sessions are provided by the ASC so that you will practice the material and learn more from the SI leader. The attendance is not mandatory, but you are encouraged to participate.
- Assignments are going to be posted (about) biweekly, so in total you will have 5 or 6 assignments. Each assignment will have a different number of problems with different score. Thus an assignment with 70 marks will weigh more than one with 100 marks. Solve as many problems as you can.
- Please write your solutions in a legible and easily comprehensible way. Also, write your solutions in the assigned order as 1, 2, etc. You can discuss the problems with your peers or the SI leader, of course, if he has time left after the session. However, the solutions should be of your own. As you might have already realized, understanding a solution does not guarantee that next time you will be able to solve the problem on your own. I recommend you put in some thought and effort as to how *you* would attempt to solve it, before seeking hints or a direction about how to start.
- Each of the last two assignments will have two/three extra credit problems. You don't have to submit solutions for them, but if they do, you can earn some (minor) extra marks towards your grade.
- The quizzes will be held in class, most probably at the end of the lecture. Each will take about 10-15 minutes.
- Each midterm will be held during the class that day.
- If you need any accommodation, please contact *The Access Resource Centre*. You are also welcome to talk to me about your concerns, requests or questions.
- You have the following options to receive help:
 - *Academic Success Centre* provides free tutoring with appointment. See <https://www2.unbc.ca/academic-success-centre/accessing-tutoring> for more information.
 - Some teaching assistants and faculty members spend time at MACE. Feel free to approach them, ask them if they can help you with a problem.
 - You can visit my office hours.
