
CANADA'S TRADE RELATIONS IN A CHANGING GLOBAL ECONOMY.

SHAYLEN AND ASHWIN

CANADA MONTHLY IMPORT/EXPORT

CANADA MONTHLY IMPORT/EXPORT

This graph shows how Canada's imports and exports change every month. It highlights patterns that might be linked to seasonal demand at home or global events like changes in commodity prices or political issues. Changes in imports can indicate shifts in what consumers need or changes in production. Overall, this graph helps us understand Canada's trade balance, which is very important for making economic decisions.

EXPORTS BY INDUSTRY

EXPORTS BY INDUSTRY

This graph shows Canada's exports by industry. It shows which sectors such as energy, manufacturing, and technology play the biggest role in international trade. By looking at this data, we can see which industries are strong and where there might be a chance to grow or diversify exports. This information is useful for both policymakers and other associated professionals who want to make the economy more balanced and strong.

IMPORTS BY INDUSTRY

IMPORTS BY INDUSTRY

- This graph displays the different types of goods that Canada imports, classified by industry. It shows the importance of items like raw materials, consumer products, and high-tech goods that are needed for domestic production. By studying these trends, we can spot any potential problems if supply chains are interrupted and think about ways to boost local production. The graph shows how much Canada depends on global markets and why it is important to support local industries

GOODS TRADE BY MAIN MARKETS

GOODS TRADE BY MAIN MARKETS

- This graph shows Canada's trade with its most important international trade partners. It divides trade into different regions, such as the United States, Europe, Asia, and other parts of the world. The graph clearly shows the strong trade relationship with the United States and also points to growing opportunities in Europe and Asia. This information helps us understand the risks of relying too much on one market and the need to build more diverse trade relationships

PRICES AND VOLUMES

PRICES AND VOLUMES

- This graph combines information about prices and the amount of goods traded. Changes in prices can show shifts in supply and demand, inflation, or other market changes, while the volume of trade tells us about the overall size of market activity. When you look at both together, you get a better picture of how the market is behaving. This kind of analysis helps businesses and policymakers plan for future changes and keep the economy stable.

THE TRADE WAR BETWEEN CANADA AND THE USA

- The ongoing trade war between Canada and the US has caused a significant plunge in the stock market. Both countries have imposed tariffs on each other's goods, leading to a decline in trade and economic uncertainty. This has resulted in a decrease in investor confidence, causing a sharp decline in stock prices. Furthermore, the trade war has also affected businesses, with many companies experiencing a decrease in profits and growth. The plunging stocks have not only affected the economy but also the livelihoods of many individuals and families.
- The trade war between Canada and the US might lead to increased tariffs and barriers on goods and services, resulting in higher prices for consumers and potential job losses for workers in both countries. It might also strain diplomatic relations and lead to decreased economic growth and trade between the two nations. Additionally, a trade war could also have a ripple effect on global markets and affect the economies of other countries.
