

ECON 204 – Contemporary Economic Issues
Final Exam

Instructor: Muhebullah Karimzada

April 24, 2026

Student Name: _____

Student ID: _____

Instructions:

- This exam contains **75 multiple choice questions and one essay question**.
- You have **120 minutes** to complete the exam.
- Choose the **ONE best answer** for each question.
- Fill in the bubble completely using a dark pencil.
- No communication devices are permitted.

Multiple Choice Answer Sheet

Fill in one bubble only for each question.

Questions 1–25					Questions 26–50					Questions 51–75				
1	☐ A	☐ B	☐ C	☐ D ☐ E	26	☐ A	☐ B	☐ C	☐ D ☐ E	51	☐ A	☐ B	☐ C	☐ D ☐ E

Do not begin until instructed.

Scenario 1: Inflation Surge in Canada

Between 2024 and 2025, Canada experiences persistent inflation driven by housing, food, and services. The Consumer Price Index rises from 146.2 to 159.8. Average nominal wages increase from \$61,500 to \$64,200. The Bank of Canada raises interest rates to 6.25%, while expected inflation rises to 4.0%.

1. Inflation is closest to:

- A. 7.5%
- B. 8.2%
- C. 9.3%
- D. 9.9%
- E. 10.5%

2. Real wage growth is closest to:

- A. +3.5%
- B. +1.0%
- C. 0%
- D. -2.0%
- E. -5.0%

3. Real interest rate is closest to:

- A. 1.5%
- B. 2.0%
- C. 2.25%
- D. 3.0%
- E. 4.0%

Scenario 2: Cost of Living Crisis in Toronto

A Toronto household spends 48% of its budget on rent, 22% on food, 10% on transportation, and 20% on other goods. Rent increases by 13%, food prices increase by 8%, transportation prices increase by 5%, and other goods increase by 3%. Official CPI inflation is reported as 4.5%.

4. Household inflation is closest to:
- A. 6.5%
 - B. 7.8%
 - C. 8.9%
 - D. 9.7%
 - E. 10.4%
5. If household income rises by 5%, real purchasing power is closest to:
- A. +1%
 - B. 0%
 - C. -1%
 - D. -3%
 - E. -5%
6. The largest driver of inflation for this household is:
- A. Food
 - B. Transportation
 - C. Housing
 - D. Other goods
 - E. Exchange rate effects

Scenario 3: Income Distribution in British Columbia

Five households in a small British Columbia community earn the following annual incomes:

25,000, 35,000, 50,000, 85,000, 205,000.

7. Mean income is closest to:
- A. \$70,000
 - B. \$80,000
 - C. \$90,000
 - D. \$100,000
 - E. \$110,000
8. Income share of the top household is closest to:
- A. 35%
 - B. 40%
 - C. 45%
 - D. 50%
 - E. 55%
9. If the top income increases to \$260,000, mean income becomes closest to:
- A. \$90,000
 - B. \$100,000
 - C. \$110,000
 - D. \$120,000
 - E. \$130,000

Scenario 4: Redistribution, the Lorenz Curve, and the Gini Coefficient

A provincial government in Canada is concerned about rising income inequality and cost-of-living pressures. Similar to real-world debates about the Canada Child Benefit, refundable tax credits, and provincial affordability payments, the government considers a targeted redistribution policy. The policy gives a direct transfer to the lowest-income household and finances it through a tax on the highest-income household.

Suppose a small sample of five households has the following annual disposable incomes before the policy:

25,000, 35,000, 50,000, 85,000, 205,000.

The government introduces a redistribution policy that transfers \$15,000 from the richest household to the poorest household. After the policy, the income distribution becomes:

40,000, 35,000, 50,000, 85,000, 190,000.

For Lorenz curve calculations, incomes should be ordered from lowest to highest after redistribution.

Use the following discrete Gini coefficient formula:

$$G = 1 - \sum_{i=1}^n (Y_i + Y_{i-1})(X_i - X_{i-1}),$$

where X_i is the cumulative population share and Y_i is the cumulative income share.

10. After the redistribution policy, total income will:
- A. Rise because the poorest household receives more income
 - B. Fall because taxation reduces incentives to work
 - C. Remain unchanged because the transfer is financed within the sample
 - D. Double because both tax and transfer are counted
 - E. Become zero because income is redistributed
11. Before redistribution, the income share of the richest household is closest to:
- A. 31.25%
 - B. 41.25%
 - C. 51.25%
 - D. 61.25%
 - E. 71.25%
12. Before redistribution, the income share of the bottom 40% of households is closest to:
- A. 10%
 - B. 15%
 - C. 20%
 - D. 25%
 - E. 30%

- 13.** After redistribution, the correctly ordered income distribution is:
- A. 40,000, 35,000, 50,000, 85,000, 190,000
 - B. 35,000, 40,000, 50,000, 85,000, 190,000
 - C. 25,000, 35,000, 50,000, 85,000, 205,000
 - D. 15,000, 35,000, 50,000, 85,000, 220,000
 - E. 40,000, 50,000, 35,000, 190,000, 85,000
- 14.** After redistribution, the income share of the richest household is closest to:
- A. 37.5%
 - B. 42.5%
 - C. 47.5%
 - D. 52.5%
 - E. 57.5%
- 15.** Before redistribution, the cumulative income shares are closest to:
- A. 0, 0.0625, 0.1500, 0.2750, 0.4875, 1.0000
 - B. 0, 0.1000, 0.2000, 0.3000, 0.5000, 1.0000
 - C. 0, 0.0500, 0.1250, 0.2500, 0.5000, 1.0000
 - D. 0, 0.1250, 0.2500, 0.3750, 0.6250, 1.0000
 - E. 0, 0.2500, 0.3500, 0.5000, 0.7500, 1.0000
- 16.** Before redistribution, using the discrete Lorenz curve formula, the Gini coefficient is closest to:
- A. 0.18
 - B. 0.28
 - C. 0.38
 - D. 0.48
 - E. 0.58
- 17.** After redistribution, the cumulative income shares are closest to:
- A. 0, 0.0875, 0.1875, 0.3125, 0.5250, 1.0000
 - B. 0, 0.1000, 0.2000, 0.3000, 0.5000, 1.0000
 - C. 0, 0.0625, 0.1500, 0.2750, 0.4875, 1.0000
 - D. 0, 0.1250, 0.2125, 0.3375, 0.5250, 1.0000
 - E. 0, 0.2000, 0.3000, 0.4250, 0.6250, 1.0000

18. After redistribution, the Gini coefficient is closest to:
- A. 0.20
 - B. 0.30
 - C. 0.40
 - D. 0.50
 - E. 0.60
19. The redistribution policy changes inequality because:
- A. It raises total income and therefore automatically reduces inequality
 - B. It lowers total income and therefore automatically increases inequality
 - C. It increases the income share of lower-income households and lowers the income share of the richest household
 - D. It changes only the median income and leaves the Lorenz curve unchanged
 - E. It makes every household receive the same income
20. The Lorenz curve after redistribution will:
- A. Move farther away from the 45-degree equality line
 - B. Move closer to the 45-degree equality line
 - C. Become vertical
 - D. Become horizontal
 - E. Remain exactly unchanged
21. Suppose instead that the area under the Lorenz curve rises from 0.38 to 0.42. Using the relationship

$$G = 1 - 2A,$$

where A is the area under the Lorenz curve, the new Gini coefficient is:

- A. 0.58
- B. 0.52
- C. 0.42
- D. 0.32
- E. 0.16

22. Which statement best connects this scenario to real-world Canadian inequality policy?
- A. Redistribution policies can reduce measured inequality, but their effect depends on size, targeting, and financing
 - B. Redistribution always increases total GDP immediately
 - C. Redistribution has no effect on income distribution
 - D. Transfers only affect inflation and not inequality
 - E. The Gini coefficient cannot be used to evaluate redistribution

Scenario 5: Automation in Ontario Manufacturing

An Ontario manufacturing plant introduces artificial intelligence and robotics that replace 30% of routine production workers. High-skill workers who manage and maintain the new technology receive a 35% wage increase, while low-skill workers receive only a 6% wage increase.

23. If initial wages were \$30 for high-skill workers and \$20 for low-skill workers, the new wage gap is closest to:
- A. \$12
 - B. \$15
 - C. \$18
 - D. \$20
 - E. \$25
24. This situation is best explained by:
- A. Labour supply shift
 - B. Skill-biased technological change
 - C. Inflation shock
 - D. Fiscal expansion
 - E. Exchange rate depreciation
25. The likely long-run labour market result is:
- A. Wage compression
 - B. Job polarization
 - C. Perfect wage equality
 - D. Zero employment
 - E. Lower productivity

Scenario 6: Gig Economy Reality in Canada

An Uber driver in Toronto earns \$32 per hour in gross revenue. However, fuel, insurance, maintenance, and depreciation cost \$11 per hour. In addition, 20% of the driver's time is unpaid waiting time.

26. Effective hourly earnings are closest to:
- A. \$12
 - B. \$14
 - C. \$16
 - D. \$18
 - E. \$20
27. If costs rise to \$13 per hour, effective hourly earnings become closest to:
- A. \$10
 - B. \$12
 - C. \$14
 - D. \$16
 - E. \$18
28. This example most clearly demonstrates:
- A. Perfect competition
 - B. Monopsony power and weak worker bargaining power
 - C. Demand-pull inflation
 - D. Productivity growth
 - E. Fiscal policy

Scenario 7: Housing Affordability in Vancouver

A Vancouver household earns \$110,000 annually. The average home price in the area is \$1,045,000. At the same time, mortgage payments for a comparable home rise from \$2,800 to \$4,200 per month due to higher interest rates.

29. The price-to-income ratio is closest to:
- A. 7
 - B. 8
 - C. 9
 - D. 9.5
 - E. 10
30. The percentage increase in monthly mortgage payments is closest to:
- A. 30%
 - B. 40%
 - C. 50%
 - D. 60%
 - E. 70%
31. This implies that housing affordability has:
- A. Improved
 - B. Worsened
 - C. Remained unchanged
 - D. Reached equilibrium
 - E. Become irrelevant

Scenario 8: Mortgage Renewal Shock in Canada

A Canadian homeowner took out a \$650,000 mortgage at a 2.3% interest rate five years ago. At renewal, the mortgage rate rises to 6.1%.

32. The likely payment increase is closest to:
- A. 20%
 - B. 30%
 - C. 40%
 - D. 50%
 - E. 60%

33. If household income is fixed, the shelter-cost burden will:

- A. Decrease
- B. Remain unchanged
- C. Increase
- D. Become zero
- E. Become negative

34. This shock mainly affects:

- A. Renters
- B. Recent buyers and mortgage holders
- C. Exporters
- D. Retirees with no mortgage
- E. Banks only

Scenario 9: Rental Market Pressures

A renter in Calgary earns \$4,500 per month. Monthly rent increases from \$1,500 to \$2,250.

35. The new rent-to-income ratio is:

- A. 40%
- B. 45%
- C. 50%
- D. 55%
- E. 60%

36. Monthly income needed to keep rent at 30% of income is closest to:

- A. \$6,000
- B. \$6,500
- C. \$7,000
- D. \$7,500
- E. \$8,000

37. The rent increase will most likely cause household savings to:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero automatically

Scenario 10: Monetary Tightening Cycle

The Bank of Canada raises the policy rate from 2% to 6% to fight inflation. As borrowing costs rise, consumer borrowing falls by 15%, and business investment falls by 20%.

38. The likely effect on GDP is:

- A. GDP rises
- B. GDP falls
- C. GDP remains unchanged
- D. GDP doubles
- E. GDP becomes zero

39. If housing demand elasticity is -1.5 , a 10% increase in mortgage costs reduces housing demand by:

- A. 5%
- B. 10%
- C. 15%
- D. 20%
- E. 25%

40. Exchange rate appreciation reduces import prices by:

- A. Raising inflation
- B. Lowering inflation
- C. Having no effect
- D. Doubling prices
- E. Eliminating trade

Scenario 11: Global Oil Shock

A geopolitical conflict disrupts global oil supply, causing oil prices to rise by 25%. Energy represents 20% of total production costs for many firms.

41. The approximate increase in total production costs is:

- A. 3%
- B. 5%
- C. 7%
- D. 10%
- E. 15%

42. This is an example of:

- A. Demand-pull inflation
- B. Cost-push inflation
- C. Deflation
- D. Wage inflation only
- E. No inflationary pressure

43. Output will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero

Scenario 12: Immigration and Housing Demand

Canada increases immigration targets. Population rises by 3%, but housing supply rises by only 1%.

44. Net demand pressure is closest to:

- A. 1%
- B. 2%
- C. 3%
- D. 4%

- E. 5%
45. If housing supply elasticity is low, prices will:
- A. Fall
 - B. Rise sharply
 - C. Remain unchanged
 - D. Become zero
 - E. Become negative
46. The likely distributional effect is:
- A. Lower inequality
 - B. Higher housing-related inequality
 - C. No change in inequality
 - D. Perfect equality
 - E. Lower rents

Scenario 13: Interest Rates and Housing Prices

Mortgage rates rise by 3 percentage points. Housing demand elasticity with respect to mortgage rates is estimated at -1.2 . Housing supply is fixed in the short run.

47. Housing demand falls by approximately:
- A. 2%
 - B. 3%
 - C. 4%
 - D. 5%
 - E. 6%
48. If housing supply is fixed, house prices will likely:
- A. Rise
 - B. Fall
 - C. Remain unchanged
 - D. Double
 - E. Collapse to zero

49. Rental demand will likely:

- A. Fall
- B. Rise
- C. Remain unchanged
- D. Become zero
- E. Become negative

Scenario 14: Wage-Price Spiral

Workers expect inflation to remain high. Unions negotiate a 6% wage increase. Firms respond by raising prices by 5% to protect profit margins.

50. Real wage growth is approximately:

- A. +1%
- B. 0%
- C. -1%
- D. -5%
- E. +5%

51. In the next bargaining round, wage demands will likely:

- A. Fall
- B. Rise
- C. Remain unchanged
- D. Become zero
- E. Become negative

52. The likely macroeconomic outcome is:

- A. Inflation disappears
- B. Inflation persists
- C. Deflation occurs
- D. Prices become stable immediately
- E. Interest rates become irrelevant

Scenario 15: Housing Wealth Inequality

Over a decade, home values in a metropolitan area double. Older households are more likely to own homes, while younger households are more likely to rent.

53. The increase in home values is:

- A. 50%
- B. 75%
- C. 100%
- D. 150%
- E. 200%

54. Renters' relative wealth position:

- A. Improves
- B. Worsens
- C. Remains unchanged
- D. Doubles
- E. Becomes zero

55. Overall wealth inequality:

- A. Falls
- B. Rises
- C. Remains unchanged
- D. Becomes zero
- E. Becomes negative

Scenario 16: Zoning Reform in Toronto

Toronto reforms zoning rules to allow more high-density housing near transit stations. As a result, housing supply increases by 20% while demand remains approximately fixed.

56. The likely direction of house prices is:

- A. Rise
- B. Fall
- C. Remain unchanged

- D. Double
- E. Become zero

57. Rents will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero

58. Housing-related inequality will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Become zero
- E. Become negative

Scenario 17: Gig Regulation in British Columbia

British Columbia introduces new labour protections for platform workers. These protections raise firm costs by 15%, while workers' effective wages rise by 10%.

59. Firm profits will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero automatically

60. The employment effect is:

- A. Always positive
- B. Always negative
- C. Ambiguous
- D. Zero
- E. Infinite

61. Worker welfare will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Become zero
- E. Become negative

Scenario 18: Recession Shock

A recession reduces GDP by 3%. Firms reduce hiring, unemployment rises, and households become more cautious with spending.

62. Wages will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero

63. Consumption will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero

64. Inequality may:

- A. Fall
- B. Rise
- C. Remain unchanged always
- D. Become zero
- E. Become negative

Scenario 19: CPI Bias

Suppose true cost-of-living inflation is 5%, but the official CPI reports inflation as 6% because the fixed basket does not fully capture consumers switching toward cheaper substitutes.

65. This bias is mainly caused by:

- A. Substitution bias
- B. Higher taxes
- C. Wage growth
- D. Export growth
- E. Import restrictions

66. The official CPI:

- A. Overstates inflation
- B. Understates inflation
- C. Measures inflation exactly
- D. Equals zero
- E. Measures unemployment

Scenario 20: Exchange Rate Dynamics

Canada raises interest rates above U.S. interest rates. International investors respond by buying more Canadian assets.

67. Capital flows will likely move:

- A. Out of Canada
- B. Into Canada
- C. Nowhere
- D. Only into housing
- E. Only into exports

68. The Canadian dollar will likely:

- A. Depreciate
- B. Appreciate
- C. Remain unchanged

- D. Become zero
- E. Become negative

69. Imports will become:

- A. Cheaper
- B. More expensive
- C. Unchanged
- D. Impossible
- E. Tax-free

Scenario 21: Real Interest Rate Shock

The real interest rate rises by 2 percentage points. Households and firms respond by reducing borrowing and delaying large purchases.

70. Investment will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero instantly

71. GDP will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero

72. Borrowing will likely:

- A. Rise
- B. Fall
- C. Remain unchanged
- D. Double
- E. Become zero automatically

Scenario 22: Combined Canadian Macro Crisis

Canada faces several simultaneous pressures: inflation is 6%, interest rates are 6%, housing supply is constrained, and nominal wage growth is only 4%. Renters, recent homebuyers, and low-income households face the most pressure.

73. Real wage growth is approximately:

- A. +2%
- B. 0%
- C. -2%
- D. -4%
- E. -6%

74. Housing affordability will likely:

- A. Improve
- B. Worsen
- C. Remain unchanged
- D. Double
- E. Become zero

75. The overall macroeconomic outcome is best described as:

- A. Stability
- B. Volatility and policy trade-offs
- C. Perfect growth
- D. Automatic equilibrium
- E. Zero inflation

Essay Question

Over the course of the semester, students presented on a range of major contemporary economic issues, including:

- Housing Affordability Crisis in Canada
- Canada's Aging Population
- Inflation and Cost of Living Pressures
- The Role of Immigration in Canada's Economy
- Climate Change and Carbon Pricing
- Indigenous Economic Development
- Income Inequality in Canada
- The Future of Work in Canada
- Labour Market Dynamics
- Healthcare Systems and Spending

These topics are deeply interconnected and reflect the complex trade-offs policymakers and stakeholders must navigate in shaping Canada's economic future.

Choose any **two** of the topics listed above and respond to the following:

1. Summarize the key economic issues, arguments, and findings related to each of the two topics, based on the presentations and class discussions. What trends, challenges, or solutions were highlighted?
2. Analyze the interconnections between your selected topics. For example:
 - How might climate change policies affect income inequality?
 - In what ways could immigration help address labour shortages driven by Canada's aging population?
 - How does inflation affect housing affordability or Indigenous economic development?
3. Evaluate the role of public policy in managing these challenges. What kinds of policy interventions have been proposed or implemented? How might policymakers address these issues in a coordinated way?

4. Present your own informed opinion: Between the two topics you selected, which one represents the more urgent economic issue for Canada in the next 5–10 years? Justify your position using relevant economic theories, real-world data, and examples from current events.

Your response should show clear critical thinking, integration of course materials, and a strong understanding of Canada's current economic landscape.

Suggested word count: 600–800 words.
